

Preaction Sprinkler Systems

USA Fire Protection

What is a preaction system?

A preaction system is a dry pipe system that requires two means of detection before a sprinkler head releases water.

Where are they used?

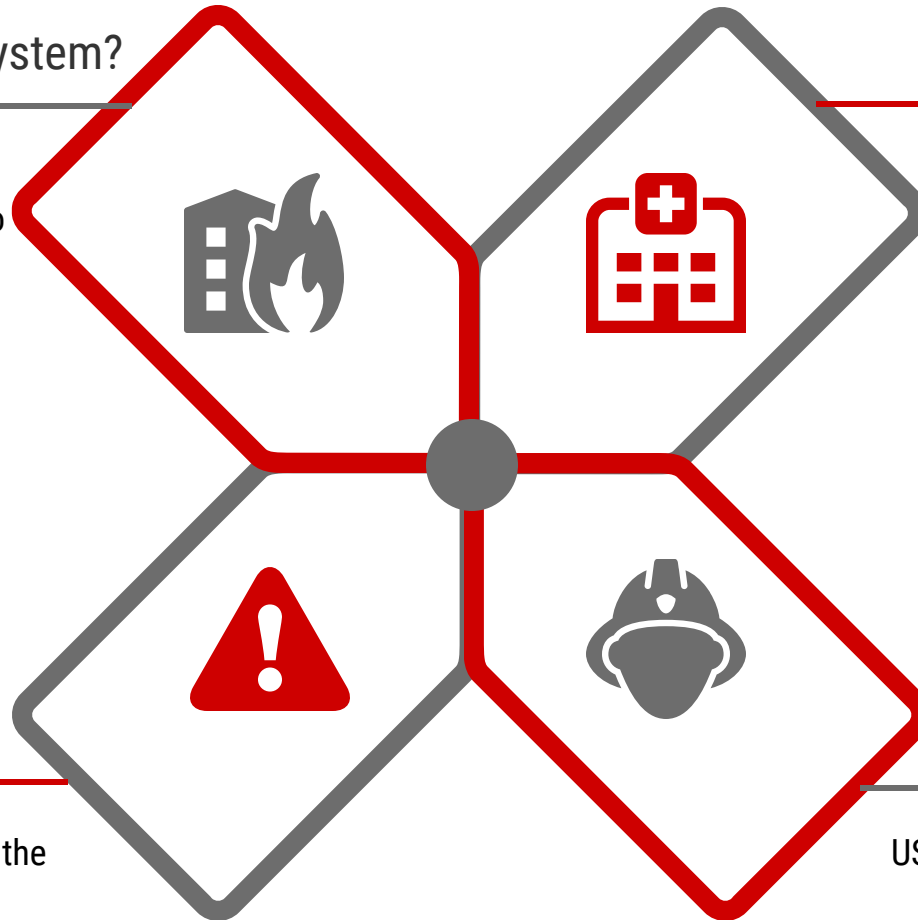

Preaction systems are used in sensitive areas such as server rooms, museums, medical treatment areas, and laboratories.

What is the benefit?

Preaction systems eliminate the false release of water in the event of accidental sprinkler damage.

What can USAFP do?

USAFP has the solution to protect your most sensitive areas from fire with our skills to provide preaction systems.
